

Next Steps for the FCEV Learning Demonstration Project

**Keith Wipke, Sam Sprik,
Jennifer Kurtz, Todd
Ramsden, Chris
Ainscough, Genevieve
Saur**

February 16, 2011

**Fuel Cell & Hydrogen
Energy Conference
Washington, DC**

NREL/PR-5600-50842

This presentation does not contain any proprietary, confidential, or otherwise restricted information

Outline

- Project Goals
- Vehicle and H₂ Station Deployment Status
- Critical Performance Compared to Targets
- Highlights of Latest Vehicle and Infrastructure Analysis Results and Progress
- Learning Demo Next Steps
- Highlights of Partner Activities
- Summary

Fuel Cell Electric Vehicle Learning Demo

Project Objectives, Relevance, and Targets

- Objectives
 - Validate H₂ FC Vehicles and Infrastructure in Parallel
 - Identify Current Status and Evolution of the Technology
- Relevance
 - Objectively Assess Progress Toward Technology Readiness
 - Provide Feedback to H₂ Research and Development

Key Targets

| Performance Measure | 2009 | 2015 |
|----------------------------|------------|------------|
| Fuel Cell Stack Durability | 2000 hours | 5000 hours |
| Vehicle Range | 250+ miles | 300+ miles |
| Hydrogen Cost at Station | \$3/gge | \$2-3/gge |

Note: Project extended 2 years through 2011

Burbank, CA station. Photo: NREL

Two Teams Concluded Their Projects in 2009, Three are Continuing through 2011

Ford/BP and Chevron/Hyundai-Kia Concluded in 2009

Daimler, GM, and Air Products Continue to Demonstrate Vehicles/Stations within Project through 2011

Vehicle Status: All 350 bar Vehicles Retired, Only 700 bar Vehicles Continuing

+3

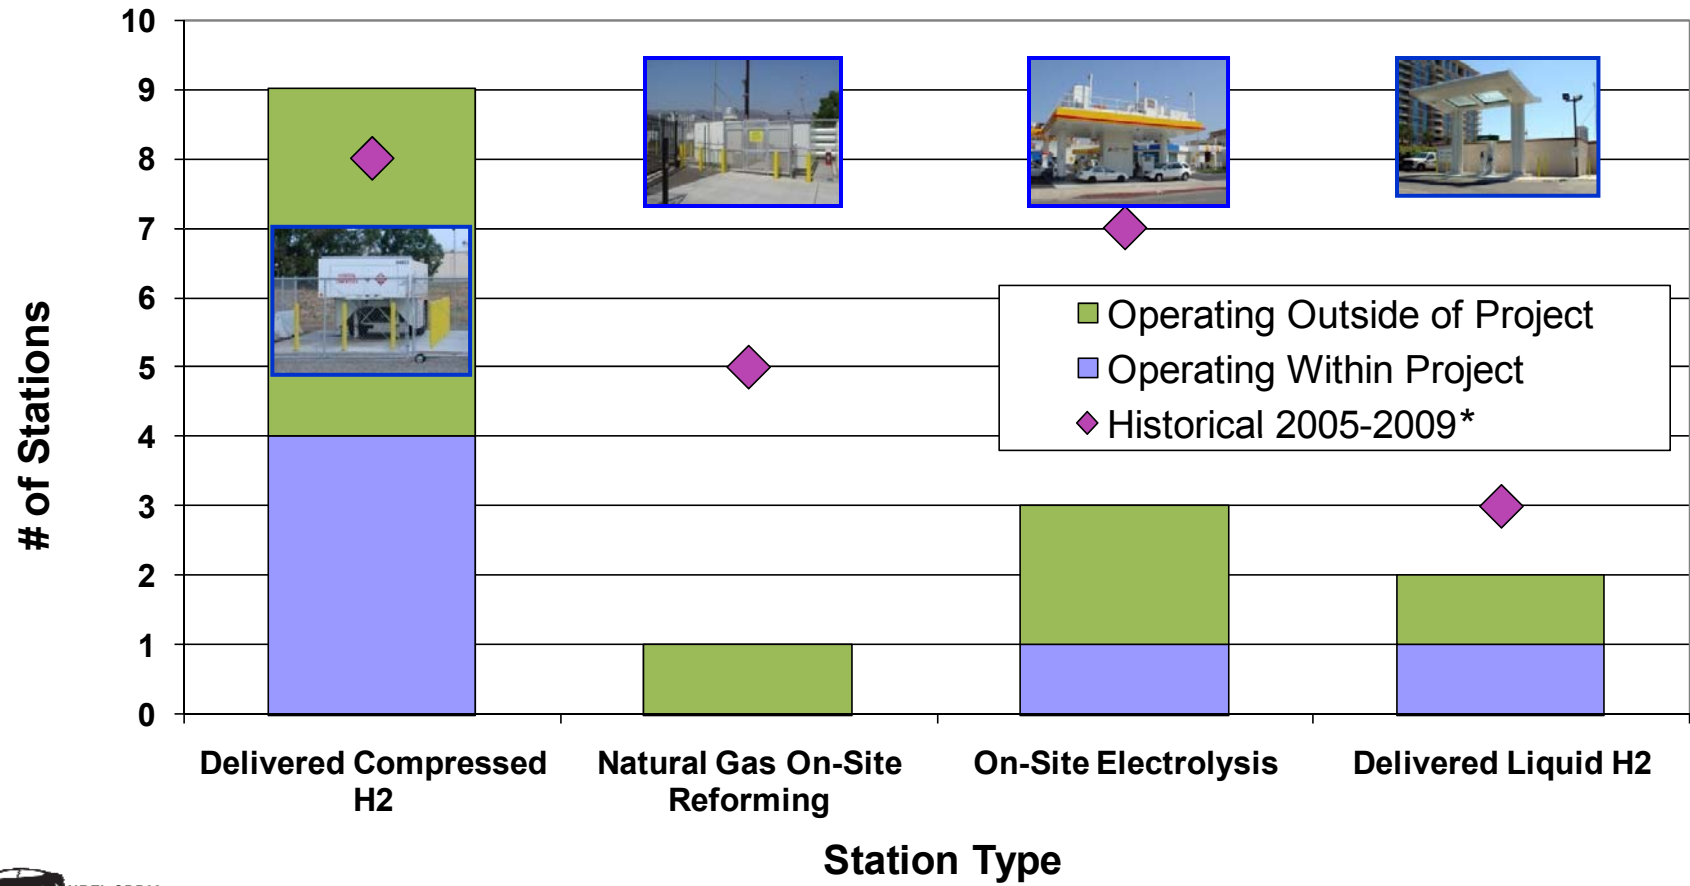

NREL CDP25
Created Sep-07-2010 8:43 AM

(1) Retired vehicles have left DOE fleet and are no longer providing data to NREL
(2) Two project teams concluded in Fall/Winter 2009

Total of ~40 project vehicles expected on road in 2011, for total of ~170 deployed

Fueling Station Status: Stations that Continue to Operate are Mostly Delivered Compressed Hydrogen

Learning Demonstration Hydrogen Stations By Type

NREL CDP32
Created Aug-24-10 4:05pm

*Some project teams concluded Fall/Winter 2009. Markers show the cumulative stations operated during the 2005-2009 period

Out of 24 Project Stations, 15 Are Still Operational (2/3 outside of DOE project)

Project Achieved Both Technical Goals; Outside Analysis Used for Cost Evaluation

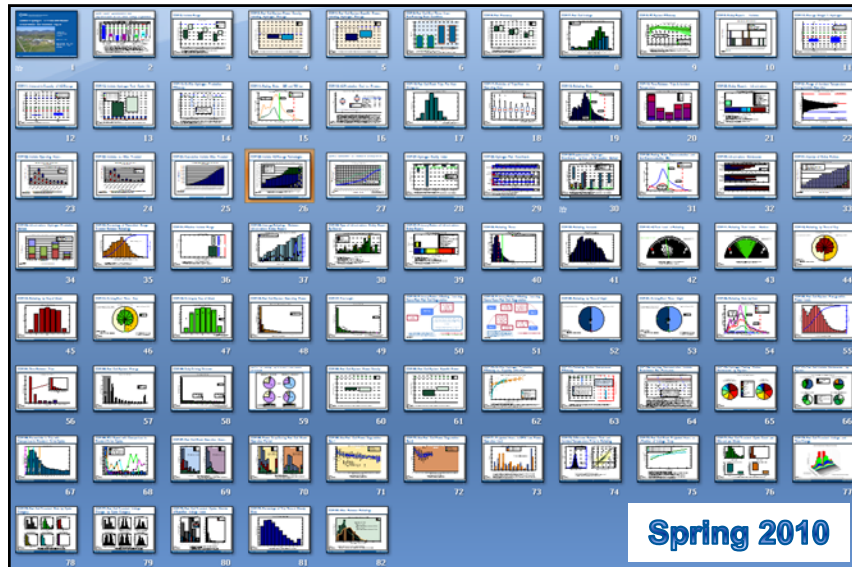

| Vehicle Performance Metrics | Gen 1 Vehicle | Gen 2 Vehicle | 2009 Target |
|---|----------------------|---|-------------------|
| Fuel Cell Stack Durability | | | 2000 hours |
| Max Team Projected Hours to 10% Voltage Degradation | 1807 hours | <u>2521</u> hours  | |
| Average Fuel Cell Durability Projection | 821 hours | 1062 hours | |
| Max Hours of Operation by a Single FC Stack to Date | 2375 hours | 1261 hours | |
| Driving Range | 103-190 miles | 196-<u>254</u> miles  | 250 miles |
| Fuel Economy (Window Sticker) | 42 – 57 mi/kg | 43 – 58 mi/kg | no target |
| Fuel Cell Efficiency at ¼ Power | 51 - 58% | 53 - <u>59</u> % | 60% |
| Fuel Cell Efficiency at Full Power | 30 - 54% | 42 - <u>53</u> % | 50% |

| Infrastructure Performance Metrics | | | 2009 Target |
|---|--|--|----------------|
| H₂ Cost at Station (early market) | On-site natural gas reformation \$7.70 - \$10.30 | On-site Electrolysis \$10.00 - \$12.90 | \$3/gge |
| Average H ₂ Fueling Rate | 0.77 kg/min | | 1.0 kg/min |

Outside of this project, DOE independent panels concluded at 500 replicate stations/year:
 Distributed natural gas reformation at 1500 kg/day: **\$2.75-\$3.50/kg** (2006)
 Distributed electrolysis at 1500kg/day: **\$4.90-\$5.70** (2009)

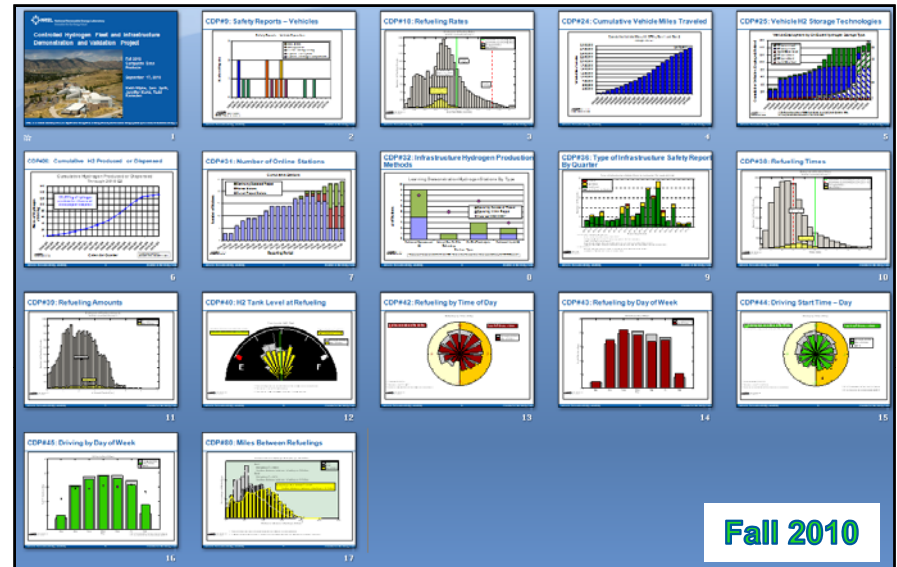

What are the Most Recent Project Results? Differences Between Spring & Fall 2010 CDPs

80 Spring 2010 Results

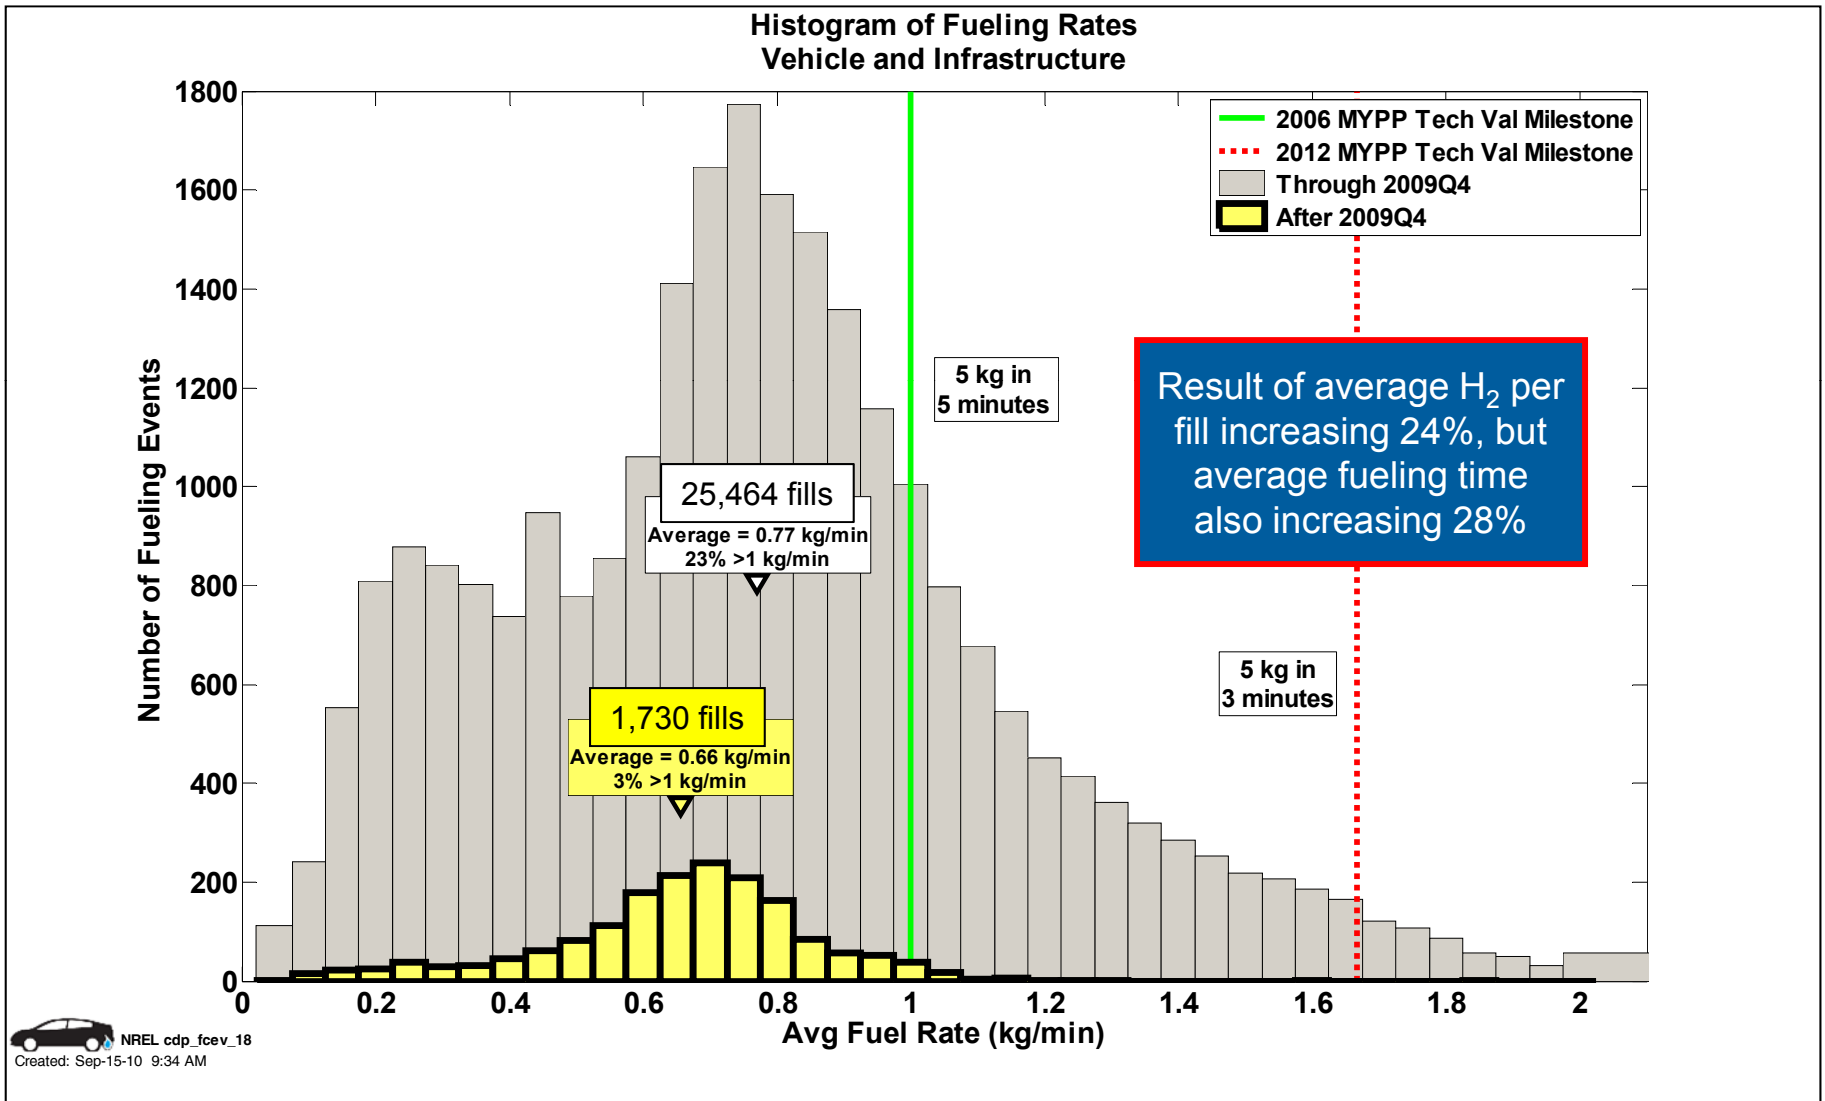

- Most comprehensive set we ever published
- Includes durability, range, fuel economy, etc.
- Covers data from all 4 Learning Demo teams + CHIP project over 5 year period
- Majority of these will now stay static, serving as a historical record of Gen 1 & Gen 2 comparisons.

16 Fall 2010 Results

- No “new” CDPs, but we updated 16 previously published CDPs with data from last 6 months
- Results on most recent durability, range, fuel economy, not yet possible to publish until more data accumulated (in 2011)
- Covers data from 2 Learning Demo OEMs + CHIP project
- Emphasized changes observed in last 6 months through use of gray (old) and colors (new)

Changes in Refueling Rate Trends: Average Refueling Rate Decreased 14%

Real-World Driving Range Between Refuelings Continues to Improve as Demonstration Progresses

1. Some refueling events are not detected/reported due to data noise or incompleteness.
2. Distance driven between refuelings is indicative of driver behavior and does not represent the full range of the vehicle.

“window-sticker” range from adjusted dyno tests is 196-254 miles

Rate of Mileage Accumulation Has Decreased in the Last Year, But Vehicles Still Added 550,000 Miles

Cumulative Vehicle Miles: All OEMs, Gen 1 and Gen 2
Through 2010 Q2

Based on Limited Number of Fuelings in Last 6 Months, Higher Level of Tank at Refueling Observed

Driving Behavior (Timing) in Last 6 Months Much More Similar to National Average

Driving by Time of Day

% of driving trips b/t 6 AM & 6 PM: 85.3%
% of driving trips b/t 6 AM & 6 PM: 77.1%
 % of NHTS trips b/t 6 AM & 6 PM: 81.5%

Total Driving³ Events = 295222
Total Drive³ Events = 10646

Through 2009Q4
 After 2009Q4
 NHTS

1. Driving trips between 6 AM & 6 PM
2. The outer arc is set at 12 % total Driving.
3. Some events not recorded/detected due to data noise or incompleteness.

2001 NHTS Data Includes Car, Truck, Van, & SUV day trips
 ASCII.csv Source: <http://nhts.ornl.gov/download.shtml#2001>

More Weekend Driving Observed in Last Six Months – Still Much Less than National Avg.

 NREL cdp_fcev_45
Created: Sep-01-10 1:52 PM

2001 NHTS Data Includes Car, Truck, Van, & SUV day trips
ASCII.csv Source: <http://nhts.ornl.gov/download.shtml#2001>

Learning Demo Next Steps

- Currently analyzing July – December 2010 data
- Spring 2011 CDPs published in March, presented at DOE AMR in May
- Publish one or two more Learning Demo CDP sets after that
- Begin receiving fueling data from Burbank station and others

- Partners scheduled to provide data through September 2011
- Participating in many other demonstration and pre-commercial activities outside of this project

Update on Continuing Partner Activities

GM – LOU for Hawaii Hydrogen Initiative

The New York Times

December 8, 2010, 2:11 pm
G.M. Has Hydrogen Hopes for Hawaii
 By [JIM MOTAVALLI](#)

Steve Fecht for General Motors The General Motors Fuel Cell vehicle on the coast of Oahu. The ideal early market for hydrogen fuel-cell cars is small, self-contained, facing exorbitant fossil fuel prices and has an abundant supply of renewable energy on tap, according to Charles Freese, executive director of General Motors' fuel-cell activities.

Iceland, which fits that description, had actually announced its intentions to be the world's first hydrogen energy economy, but access to fuel-cell cars proved to be a crippling barrier. The Hawaiian island of Oahu, with a population of one million, may be over that hurdle.

On Wednesday, G.M. announced the Hawaii Hydrogen Initiative (or H2I in marketing speak) in Honolulu. It's a new partnership with, among others, Aloha Petroleum (which operates filling

Update on Continuing Partner Activities

Daimler – F-CELL World Drive

Mercedes-Benz F-CELL World Drive: Around the world in 125 days - Mercedes-Benz takes off on the first circumnavigation of the world with fuel cell-powered electric vehicles

Detroit, Jan 10, 2011

| Text | Photos (2) |
|--|------------|
| <input type="text" value="- select action -"/> <input type="button" value="Go"/> | |
| <p>Detroit – At the end of January Mercedes-Benz will give the starter’s signal for what until now is an unparalleled long-distance journey – the F-CELL World Drive. This is what the automotive manufacturer from Stuttgart announced at the North American Auto Show in Detroit. Mercedes-Benz will circumnavigate the world with the first series-produced fuel cell vehicle, the B-Class F-CELL. The aim of the F-CELL World Drive is to demonstrate the efficiency and suitability for everyday use of fuel cell technology, and at the same time campaign for the development of a global hydrogen filling station network.</p> <p>To demonstrate the technical maturity of the B-Class F-CELL - which currently already enables local emission-free driving in everyday use as well as on long distances - the inventor of the automobile will be setting off on the F-CELL World Drive in the B-Class F-CELL on January 30. The journey will last 125 days, driving through four continents and the widest variety of climate zones as well as an equally diverse mixture of routes, ranging from asphalt streets to unpaved roads. "With this unique circumnavigation of the world we are emphasizing the high level of technical maturity of our electric vehicles with fuel cell. Such an undertaking would not be possible, using purely battery-powered electric vehicles.", explains Dr. Thomas Weber, Member of the Board of Management of Daimler AG responsible for Group Research and Development Mercedes-Benz Cars.</p> | |

Update on Continuing Partner Activities

Air Products – 8 Stations through CEC in CA

- 11 H₂ station awards announced by CEC in Oct.
 - 8 new stations, 3 upgrades
 - Air Products planning 8 stations: 7 new, 1 upgrade – all in Southern CA
 - Linde planning 3 stations: 1 new, 2 upgrades

Summary

- Project has completed ~6 years of validation
- Vehicle operation: 114,000 hours, 2.87 million miles, 436,000 trips
- H₂ station operation: 134,000 kg produced or dispensed, 27,000 fuelings
- DOE Key Technical Targets Met: FC Durability and Range
- Data reporting and analysis continues through remainder of this year
- New CA fueling stations planned for inclusion in future NREL infrastructure analysis as they come online and provide data
