

Identifying and Estimating Project Development Costs

Energizing Rural Communities Prize:
Training #2

National Renewable Energy Laboratory
Ty Hedalen and Rory McIlmoil
December 6, 2023

AMERICAN
MADE
U.S. DEPARTMENT OF ENERGY

OCED
Office of Clean Energy Demonstrations

Agenda

1. Stages of Project Development
2. Potential Project Costs
3. Impact on Ownership Model Choice
4. Tools and Resources for Project Planning,
Projecting Costs and Revenues
5. Project Case Study: Solar + Storage Microgrid
6. Q & A

Project Development

Stages

Potential Costs

Impacts on Ownership Model Choice

AMERICAN
MADE
U.S. DEPARTMENT OF ENERGY

Stages of Project Development

1. Project Motivation
2. Site
3. Resource
4. Off-Take
5. Processes and Permits
6. Technology
7. Team
8. Capital
9. Operations and Maintenance
10. Decommissioning

Project Motivation

Pre-development is driven by

- Baseline needs
- Fundamental economics
- Policy environments
- Available technologies and resources
- Consensus

A motivated project is one that has a clear pathway to success and enough opportunity that it simply cannot be ignored.

Site

Technical Costs

- Various stakeholders
- Property rights
- Legal definition
- Assignability
- Length of tenure
- Terms/conditions
- Default/cure clauses

Physical Costs

- Slope
- Vegetation
- Soil conditions
- Infrastructure
- Access
- Resource impacts
- Other land uses

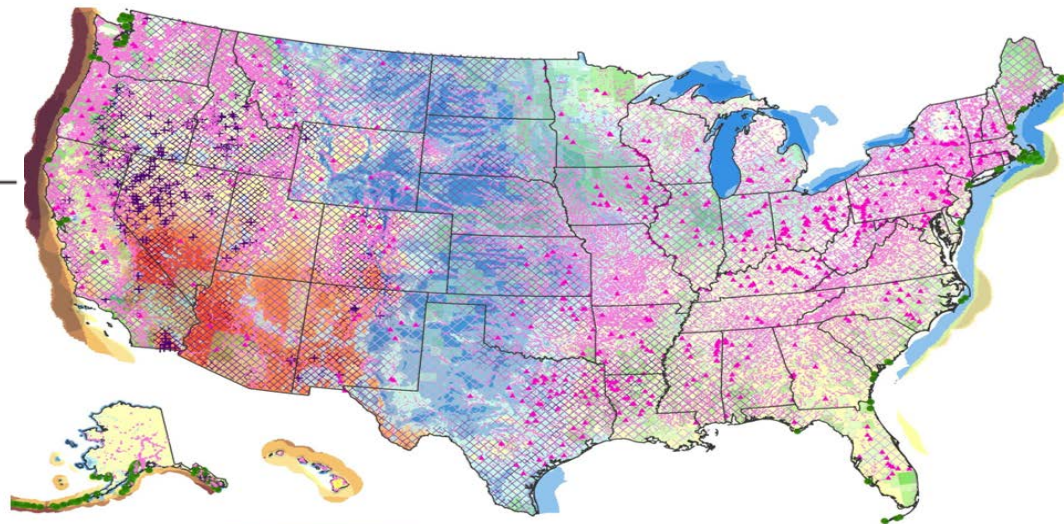

Resource Potential

Resource Potential

Total theoretical potential of a renewable energy resource

- Solar
- Wind
- Biomass
- Hydropower
- Geothermal
- Hydrokinetic

Resource
Dark = Higher
Light = Lower

¹: Does not include Alaska or Hawaii

²: Does not include Hawaii

Off-Take

Importance

- Creates value
- Bankability
- Critical project milestone

Key Issues

- Project location
- Project finance
- Transmission
- Interconnection
- Infrastructure
- Regulatory risk
- Agreeing to terms

The term “off-take” implies that there is an economic and executable agreement by the project parties, and that it is ultimately confirmed by written contract.

Processes and Permits

Action	Applicability	Contacts
Interconnection	Grid connected?	Local utility
Net Metering	Availability?	Local utility
Local/State/Tribal Permitting	Project site, Electrical	Applicable agency
Interstate Permitting	Grid connected?	RTO or ISO
Federal Permitting	<ul style="list-style-type: none">• Wildlife protection• Air and water protection• Protected land usage	Applicable federal agency

Technology

Technology Costs

- Engineering design
 - Conceptual
 - Design development
 - Construction documents
- Equipment selection
- Procurement activities

All this activity requires investment into the design process and evolves incrementally as further investment is deemed warranted for the project.

Team

Aspects to Address

- Business
- Technical
- Financial
- Legal
- Operational

Assembly of an experienced, capable team is a key element to raising debt, equity, and incentive/grant program capital.

Capital

Source	Availability	Complexity	Providers
Grants	Low	Low-Medium	Government, Private Entities, Development Banks
Equity	Varies	Medium-High	Project Sponsor, Private Investors
Debt	High	High	Governments, Capital Markets, Commercial Lenders
Credit Enhancement	Medium	High	Governments, Development Banks
Third-Party Ownership	Medium	Varies	Energy Service Providers

Operations and Maintenance

O&M Costs

- Fixed costs
- Fixed cost components
- Maintenance costs
- Variable cost components
- Maintenance components
- Replacement costs
- Planning and budgeting for O&M
- Billing and accounting
- Tax preparation and filling
- Enforcement of warranties
- REC certification and trading
- Compliance

An effective O&M program reinforces confidence in the long-term performance and revenue capacity of an asset.

Decommissioning

Alternative	Extend	Refurbish	Repower	Decommission
Advantage	Defers disposal costs	Restores some lost performance	Enhances performance with new technology	Frees land and other assets for subsequent use
	No capital investment	Leverages existing plant and arrangements	Leverages existing infrastructure and arrangements	Discontinues expenses
	Leverages existing arrangements		Low maintenance costs	
Disadvantage	Degraded performance	Some capital investment	Higher capital investment	Incurs decommission costs
	High maintenance costs	High maintenance costs		Forfeits existing arrangements

Other Cost Considerations

- Standards
- Regulatory
- Tax
- Challenges
- Best practices

Impacts on Ownership Model Choice

Complexity

Low

Medium

High

Stage of Development	Community Shared Partnership	Direct Utility Owned	Third-Party PPA
Project Motivation	Low	Low	Low
Site	Medium	High	Medium
Resource	Low	Low	Low
Off-Take	Medium	Low	Medium
Processes and Permits	Medium	High	Medium
Technology	Medium	Medium	Medium
Team	Medium	Medium	Medium
Capital	High	Medium	Medium
O&M	High	High	Low
Decommissioning	High	High	Medium

Project Planning

Tools and Resources

Costs and Revenue Projections

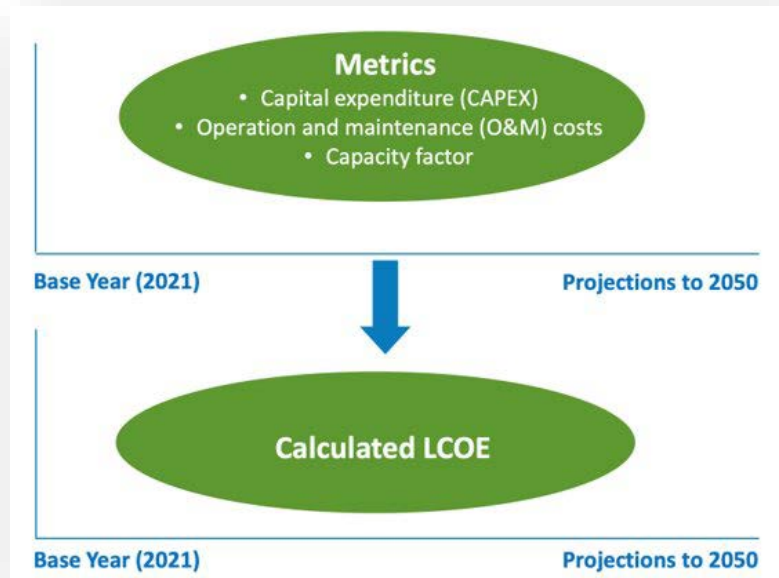

AMERICAN
MADE
U.S. DEPARTMENT OF ENERGY

Annual Technology Baseline (ATB)

"Provides consistent technology-specific cost and performance parameters across a range of R&D advancements scenarios, resource characteristics, and sites for electricity-generating technologies"

- For current year and projections through 2050
- Includes the following performance parameters:
 - Capital expenditures (CAPEX)
 - Operation and maintenance (O&M) expenditures
 - Capacity factors
 - Levelized cost of energy (LCOE)
- Updated annually

Sources: <https://atb.nrel.gov/electricity/2023/index>; <https://www.nrel.gov/docs/fy23osti/86419.pdf>

ATB Outputs

- Include capital expenditure, operations expenditures, capacity factors for three tech advancement scenarios and two policy scenarios
- Levelized cost of energy (LCOE) is a summary metric that combines all of these metrics into an average price of energy over the selected period
- Details on capital cost components (equipment, permitting, interconnection, overhead, etc) also provided

Source: <https://atb.nrel.gov/electricity/2023/index>

Summary of Minimum and Maximum Values of CAPEX, Capacity Factor, O&M and LCOE

		LCOE (\$/MWh)		CAPEX (\$/kW)		Capacity Factor		Variable O&M (\$/MWh)		Fixed O&M (\$/kW-yr)		Heat Rate (MMBtu/MWh)		OCC (\$/kW)	
		Min	Max	Min	Max	Min	Max	Min	Max	Min	Max	Min	Max	Min	Max
Land-Based Wind	R&D	26	66	1,363	1,961	0.26	0.5			29	38			1,284	1,847
Offshore Wind	R&D	73	136	3,150	3,901	0.29	0.46			102	116			2,080	2,769
Commercial DW	R&D	43	279	2,331	4,511	0.11	0.45			36	36			2,248	4,349
Large DW	R&D	43	139	2,331	2,331	0.11	0.48			36	36			2,248	2,248
Midsized DW	R&D	43	215	2,331	2,929	0.11	0.42			36	36			2,248	2,824
Residential DW	R&D	43	247	2,331	6,007	0.11	0.4			36	36			2,248	5,792
Utility PV	R&D	33	52	1,291	1,291	0.21	0.34			23	23			1,246	1,246
Commercial PV	R&D	74	115	1,754	1,754	0.12	0.19			18	18			1,691	1,691
Residential PV	R&D	123	190	2,859	2,859	0.12	0.19			30	30			2,859	2,859
CSP	R&D	94	121	7,254	7,254	0.51	0.67	3.7	3.7	69	69			6,822	6,822
Geothermal	R&D	69	103	6,750	8,971	0.8	0.9			114	151			4,547	6,043
Hydropower	R&D	77	418	3,008	19,947	0.33	0.66			28	189			2,820	18,702
Utility-Scale PV-Plus-Battery	R&D	63	98	2,102	2,102	0.23	0.35			54	62			2,028	2,028
Utility-Scale Battery Storage	R&D									24	88			943	3,520
Commercial Battery Storage	R&D									31	72			1,225	2,868
Residential Battery Storage	R&D									92	119			3,681	4,758
Pumped Storage Hydropower	R&D			2,227	4,434			0.54	0.54	19	19			2,088	4,157
Coal	R&D			3,549	6,215			8.5	15	77	150	8.3	8.5	2,857	5,002
Natural Gas	R&D			1,120	1,283			2.	6.4	24	31	6.2	9.7	1,003	1,148

 MKT = Market + Policies

Cost Categories and ATB Cost Estimates

1. Engineering (pre-development) and development, including overhead and contingency
2. Equipment: Solar modules, Inverter, "Balance of system" (including structural components)
3. Installation: Labor, Installer margin and overhead
4. Developer/installer profit
5. Sales tax
6. *Land acquisition
7. Permitting and environmental studies
8. Grid interconnection
9. Operations and maintenance

Example Project Cost Estimates

	1,000 kW Solar PV		300 kW Battery Storage		Total
	per kW	Project	per kW	Project	
Engineering/development			n/a		
Equipment	\$850	\$850,000	\$1,752	\$525,660	\$1,375,660
Labor	\$150	\$150,000	\$265	\$79,380	\$229,380
Overhead	\$660	\$660,000	\$333	\$99,780	\$759,780
Contingency	\$50	\$50,000	\$60	\$18,084	\$68,084
Profit	\$56	\$56,000	\$126	\$37,884	\$93,884
Sales tax	\$50	\$50,000	\$97	\$28,992	\$78,992
*Land acquisition	\$0	\$0	\$0	\$0	\$0
Permitting/environmental	\$30	\$30,000	\$29	\$8,664	\$38,664
Grid interconnection**	\$60	\$60,000	\$26	\$7,692	\$67,692
Total development cost	\$1,906	\$1,906,000	\$2,687	\$806,136	\$2,712,136
Operations and maintenance	\$19	\$475,000	\$59	\$445,320	\$920,320
Total lifetime cost		\$2,381,000		\$1,251,456	\$3,632,456

Simple LCOE calculator

PVWatts Calculator

- Estimates the energy production of grid-connected photovoltaic (PV) energy systems
- Allows users to easily develop estimates of the performance of potential PV installations at any location
- Outputs: monthly solar irradiation and system output*, capacity factor, system losses, etc for selected/calculated system size

Source: <https://pvwatts.nrel.gov/>

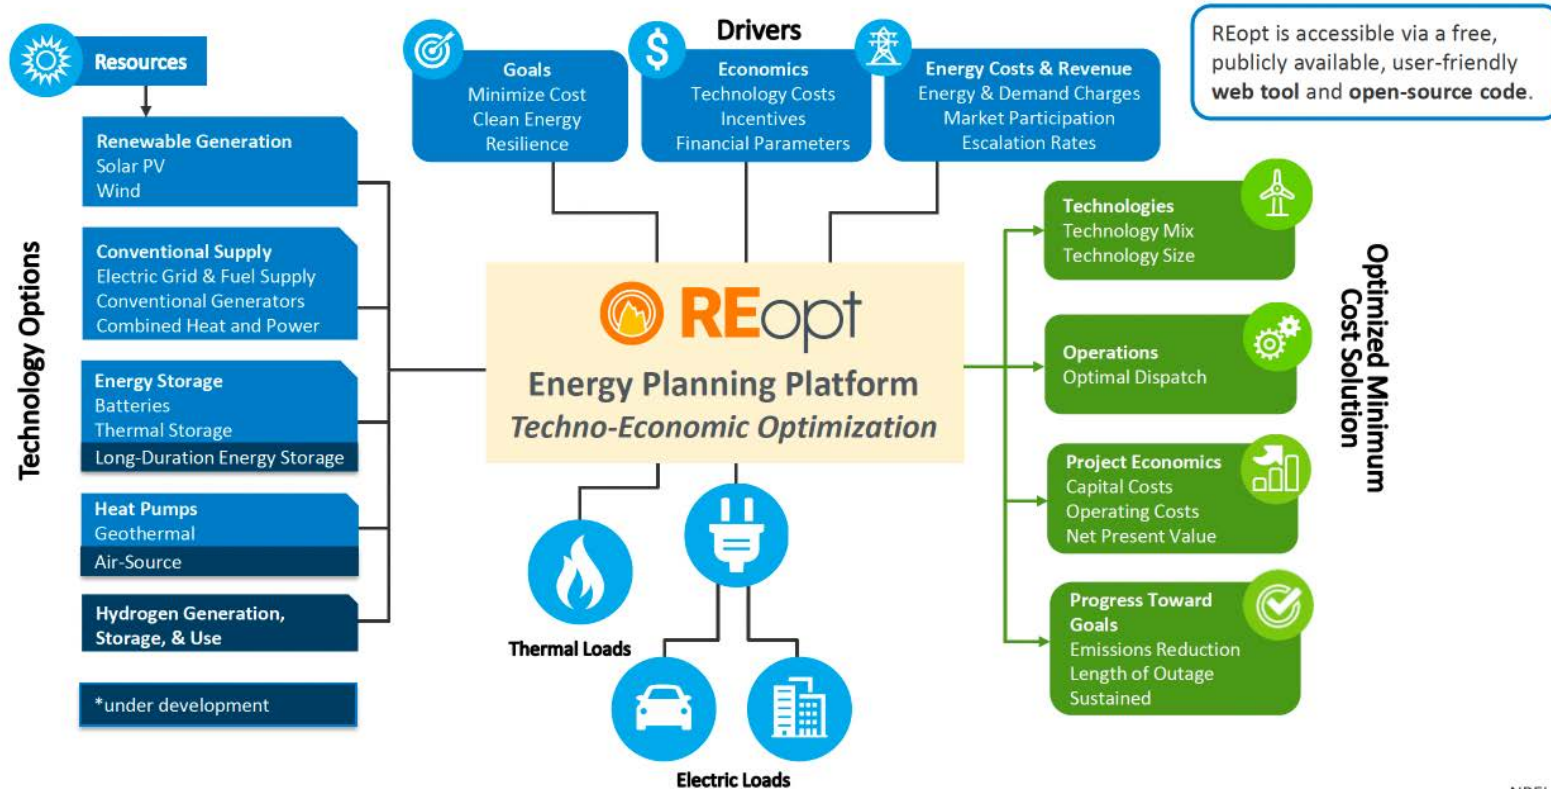

The screenshot shows the 'RESULTS' section of the PVWatts Calculator. At the top right, the total annual energy production is displayed as **6,663 kWh/Year***. Below this, a note states: 'System output may range from 6,491 to 7,053 kWh per year near this location. Click [HERE](#) for more information.' A 'Print Results' button is located to the left of the total energy value. Below the summary is a table with three columns: 'Month', 'Solar Radiation (kWh / m² / day)', and 'AC Energy (kWh)'. The table lists monthly values from January to December, with an 'Annual' total row at the bottom. The annual total for AC Energy is 6,663 kWh, and for Solar Radiation, it is 4.88 kWh/m²/day.

Month	Solar Radiation (kWh / m ² / day)	AC Energy (kWh)
January	3.78	479
February	4.04	451
March	4.97	596
April	5.64	626
May	6.00	673
June	6.17	655
July	5.80	638
August	5.44	603
September	5.03	550
October	4.68	548
November	3.99	466
December	3.01	378
Annual	4.88	6,663

REopt[®] Energy Planning Platform

Formulated as a mixed integer linear program, REopt provides an integrated, cost-optimal energy solution.

NREL

REopt Web Tool User Interface

- **REopt web tool** provides free, publicly available, user-friendly capabilities from NREL's comprehensive **open-source REopt model**
- Optimizes **PV, wind, CHP, GHP, and energy storage** system sizes and dispatch strategies to **minimize life cycle cost of energy**
- **Resilience mode** optimizes DER systems, along with backup generators, to sustain critical load during grid outages
- **Clean energy goals** allow users to consider renewable energy targets, emissions reductions targets, and emissions costs in optimization
- Access the REopt web tool at reopt.nrel.gov/tool.

Step 1: Select Single Site or Portfolio Analysis

- Single Site  Portfolio Analysis 

Step 2: Choose Your Energy Goals

- Cost Savings \$ Resilience  Clean Energy 

Step 3: Select Your Technologies

- PV  Battery  Grid  Wind  CHP 
- Prime Generator  Chilled Water Storage  Geothermal Heat Pump 

Step 4: Enter Your Site Data

Site and Utility (required) 

* Site location   [Use sample site](#)

* Electricity rate  Use custom electricity rate 

Optional inputs [Reset to default values](#)

Load Profiles (required) 

Financial 

Renewable Energy & Emissions 

PV 

Battery 

Other tool trainings

1. Introduction to the State and Local Planning for Energy (SLOPE) Platform – **November 14**
2. Introduction to REopt : Renewable Energy Integration & Optimization – **December 5**
3. *Solar Siting and Available Decision-making Tools – **January 9***
4. *Introduction to the System Advisor Model (SAM) Financial Analysis Software for Renewable Energy Systems – **January 16***

All recorded trainings are posted on our American Made Challenges website. You can find completed trainings at the bottom of the website.
