

# Modeling of H<sub>2</sub> Dispersion at ARIES

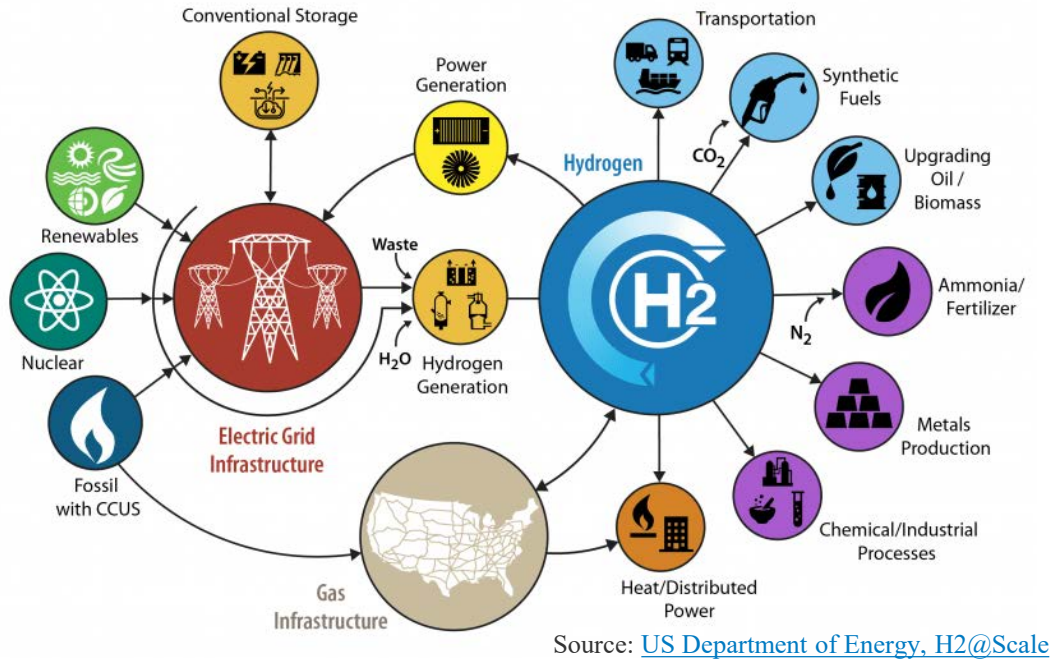

09/17/2024

Munjal Shah<sup>1</sup>, Jeffrey Gifford<sup>1</sup>, James Stewart<sup>2</sup>, David Peaslee<sup>2</sup>,  
Zhiwen Ma<sup>1</sup>, William Buttner<sup>2</sup>

<sup>1</sup>Thermal Energy Systems Group, Energy Conversion and Storage Systems Center

<sup>2</sup>Hydrogen power production and storage group, Hydrogen safety research and development

# Hydrogen emissions

## Important questions:

1. where does emissions go and in what concentrations? How much hydrogen was lost?
  2. Where should facilities place sensors to detect leaks? How many sensors?
  3. Can you do wide area monitoring for hydrogen emissions?
- and more...

# Hydrogen emissions monitoring

Safety

- Small scale (<100 m) monitoring
- Economic impact
- Local regulations

Environmental

- Large scale monitoring (>100m)
- Global warming impact
- Broad environmental regulations

# Aspects of sensing and monitoring

Where?

How?

What?

Production

Mass spectrometry

Detection

Storage

Thermal conductivity

Measurement

Transportation

Electrical conductivity

- Detection and measurement strategies changes with each use case
- Economic viability, desired resolution and confidence in measurement instrument are important.

Refueling stations

Combustible gas sensor

# NREL Flatirons Facility

*Unique site location of ARIES*

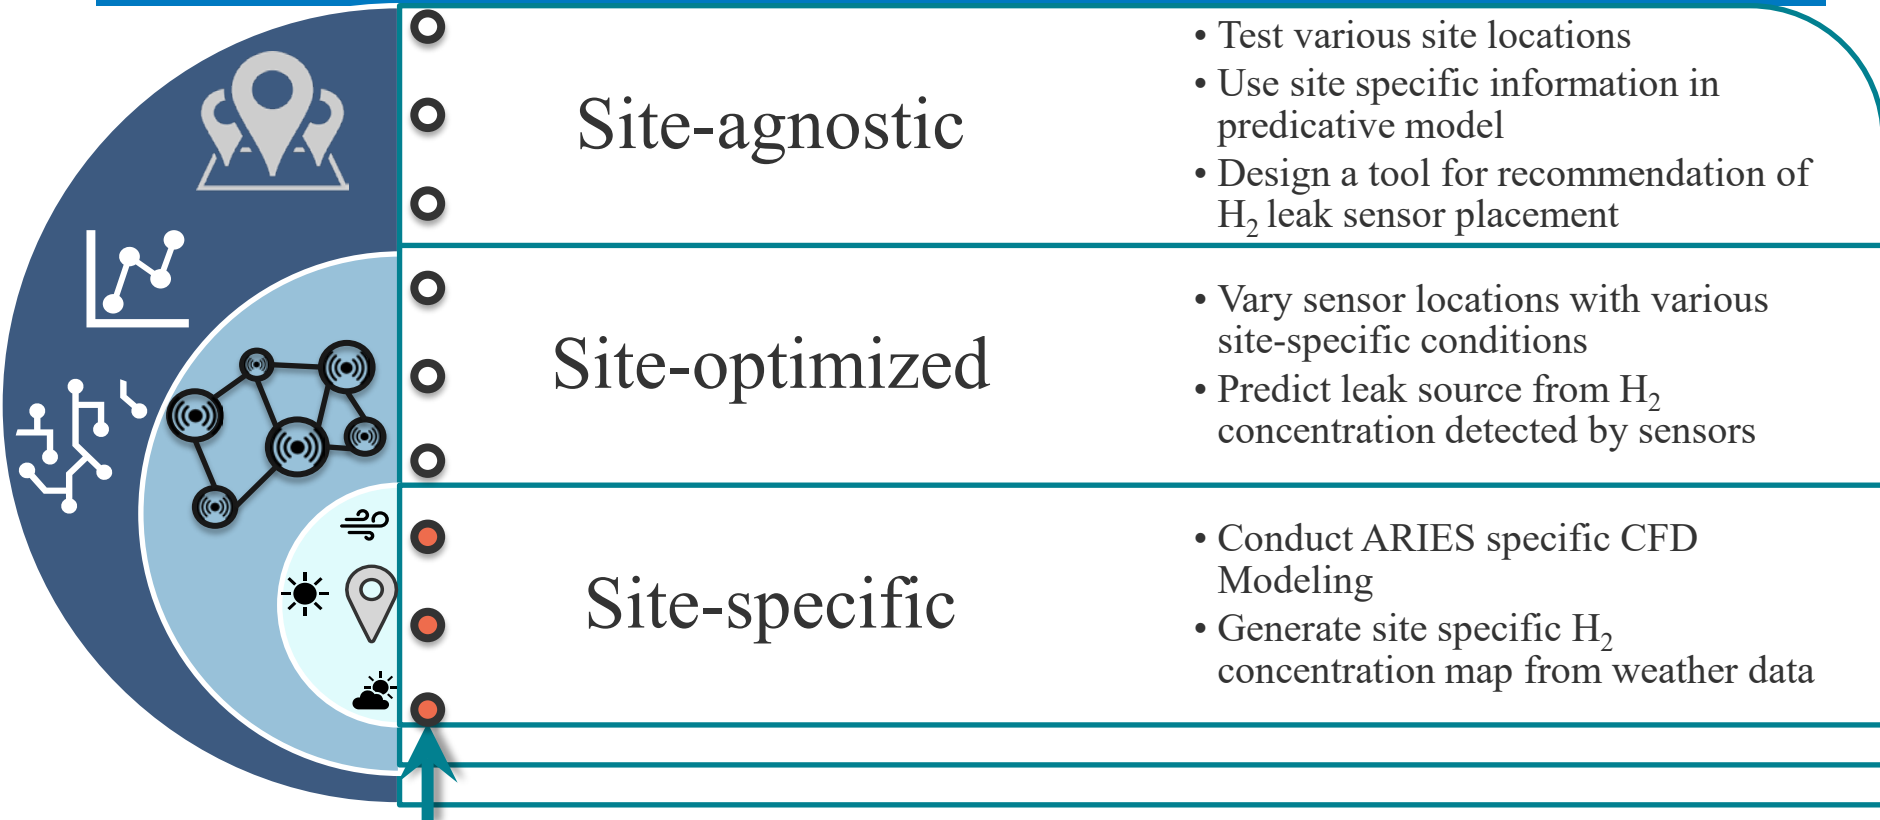

Aerial view of the hydrogen infrastructure and grid integration research pads at National Renewable Energy Laboratory's (NREL's) Flatirons Campus.

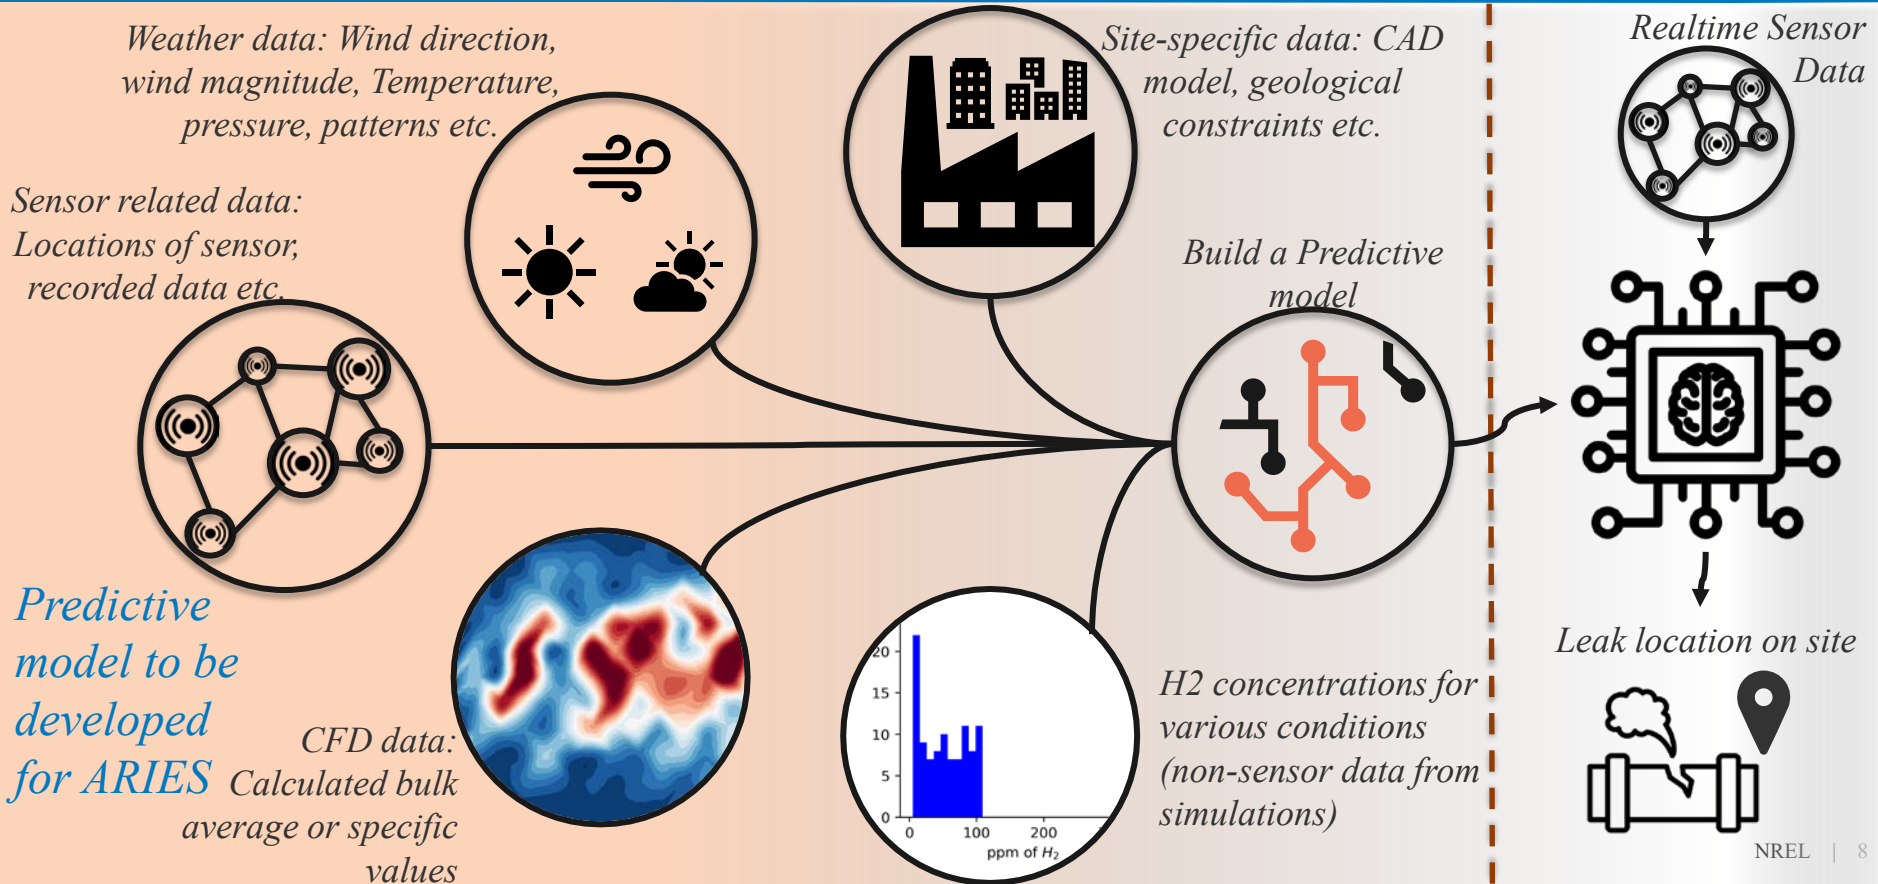

# Dispersion modeling - Long-term goals

*Three stage plan for hydrogen dispersion modeling*

# Hydrogen Dispersion modeling: Blocks for predictive model

# Ongoing Efforts

Small scale  
( $<100$  m)  
monitoring

$<5$  ppm

$>20000$  ppm

Large scale  
monitoring  
( $>100$ m)

Gaseous tracer  
compounds  
( $\text{NO}_2, \text{C}_2\text{H}_6$ )  
based  
monitoring

# Hydrogen Dispersion modeling at ARIES

Example modeling hydrogen release from vent (dashed oval to left):

- 27 kg/hr release rate
- 0.84 bar avg. ambient pressure
- Historically representative wind speed/direction

*Controlled release scenarios can be performed at ARIES*

# H<sub>2</sub> dispersion behavior

$u_0 = 2.00$  m/s (4.47 mph)

$u_0 = 1.00$  m/s (2.24 mph)

$u_0 = 0.50$  m/s (1.12 mph)

$u_0 = 0.25$  m/s (0.56 mph)

*Hydrogen dispersion nature is wind dependent*

# Stages of Hydrogen leak Modeling

*Developed pipeline for sensor placement strategy*

Site specific  
weather  
information

Site specific  
CAD and CFD  
modeling

Data processing  
of H<sub>2</sub>  
concentration

Sensor locations

Weather data

Statistically representative data

*Atmospheric conditions*

CAD model  
of site

Mesh of CFD model

Data Points

*~ N steady state CFD simulations*

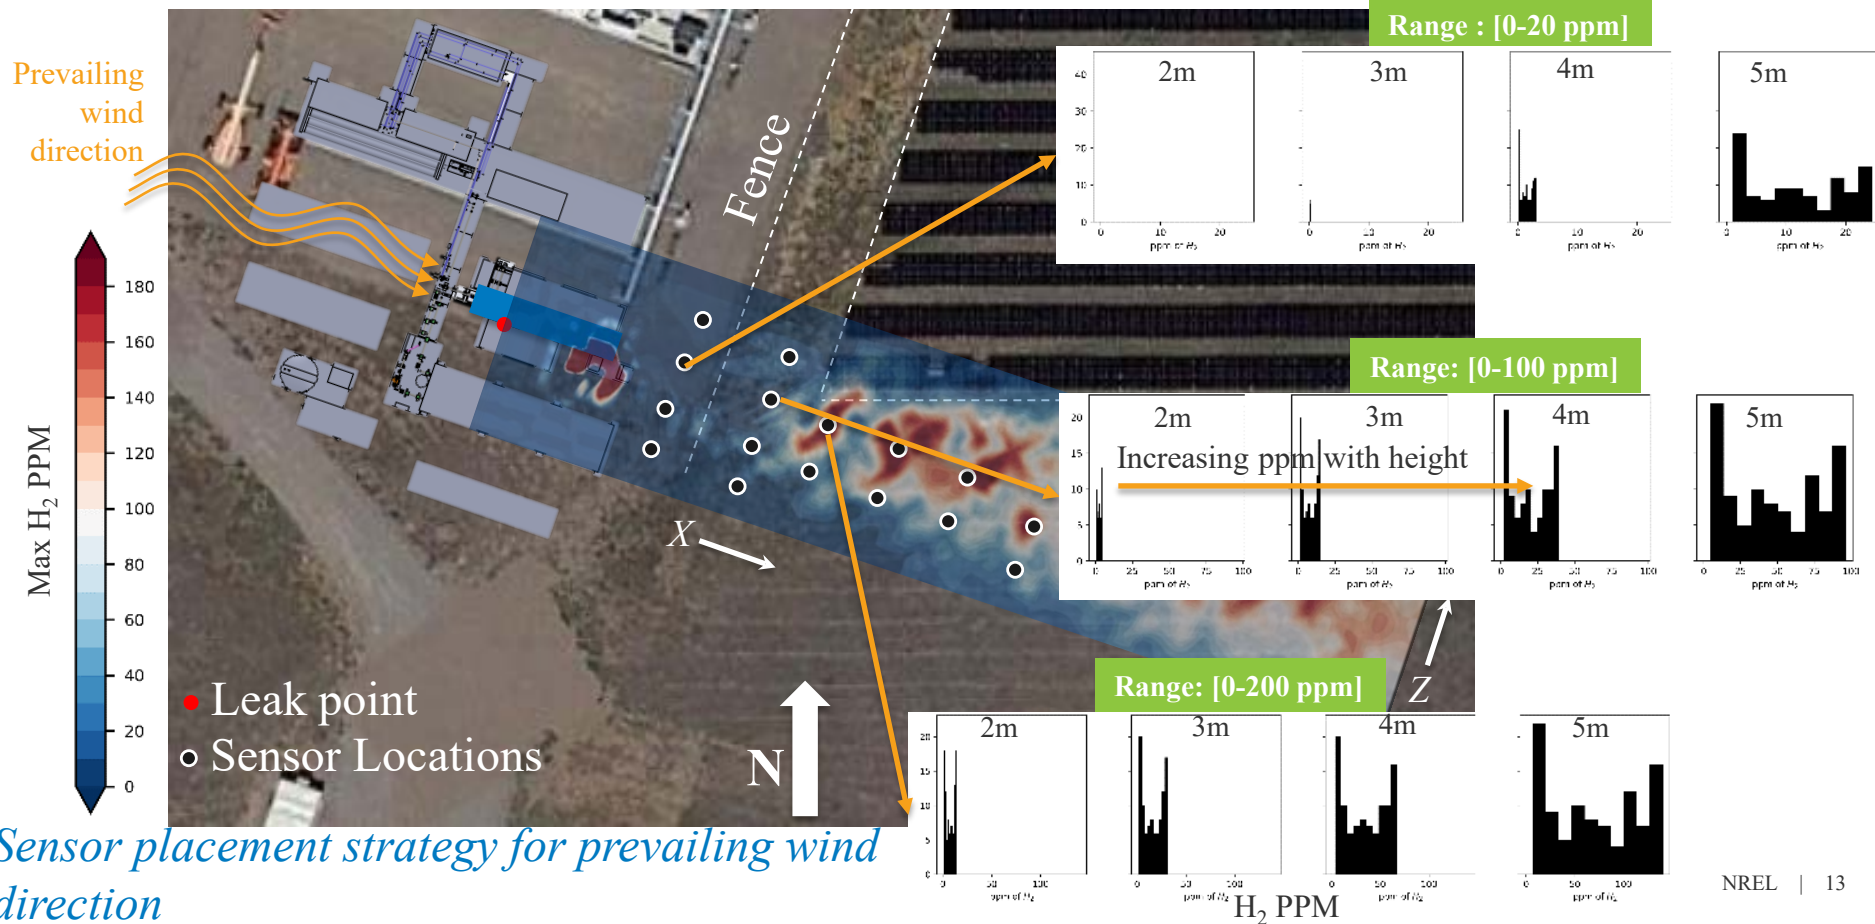

*Approximate sensor map*

*H<sub>2</sub> concentration map at various locations of interests on site*

# Hydrogen dispersion and deployment of sensors

# Simulation Domain

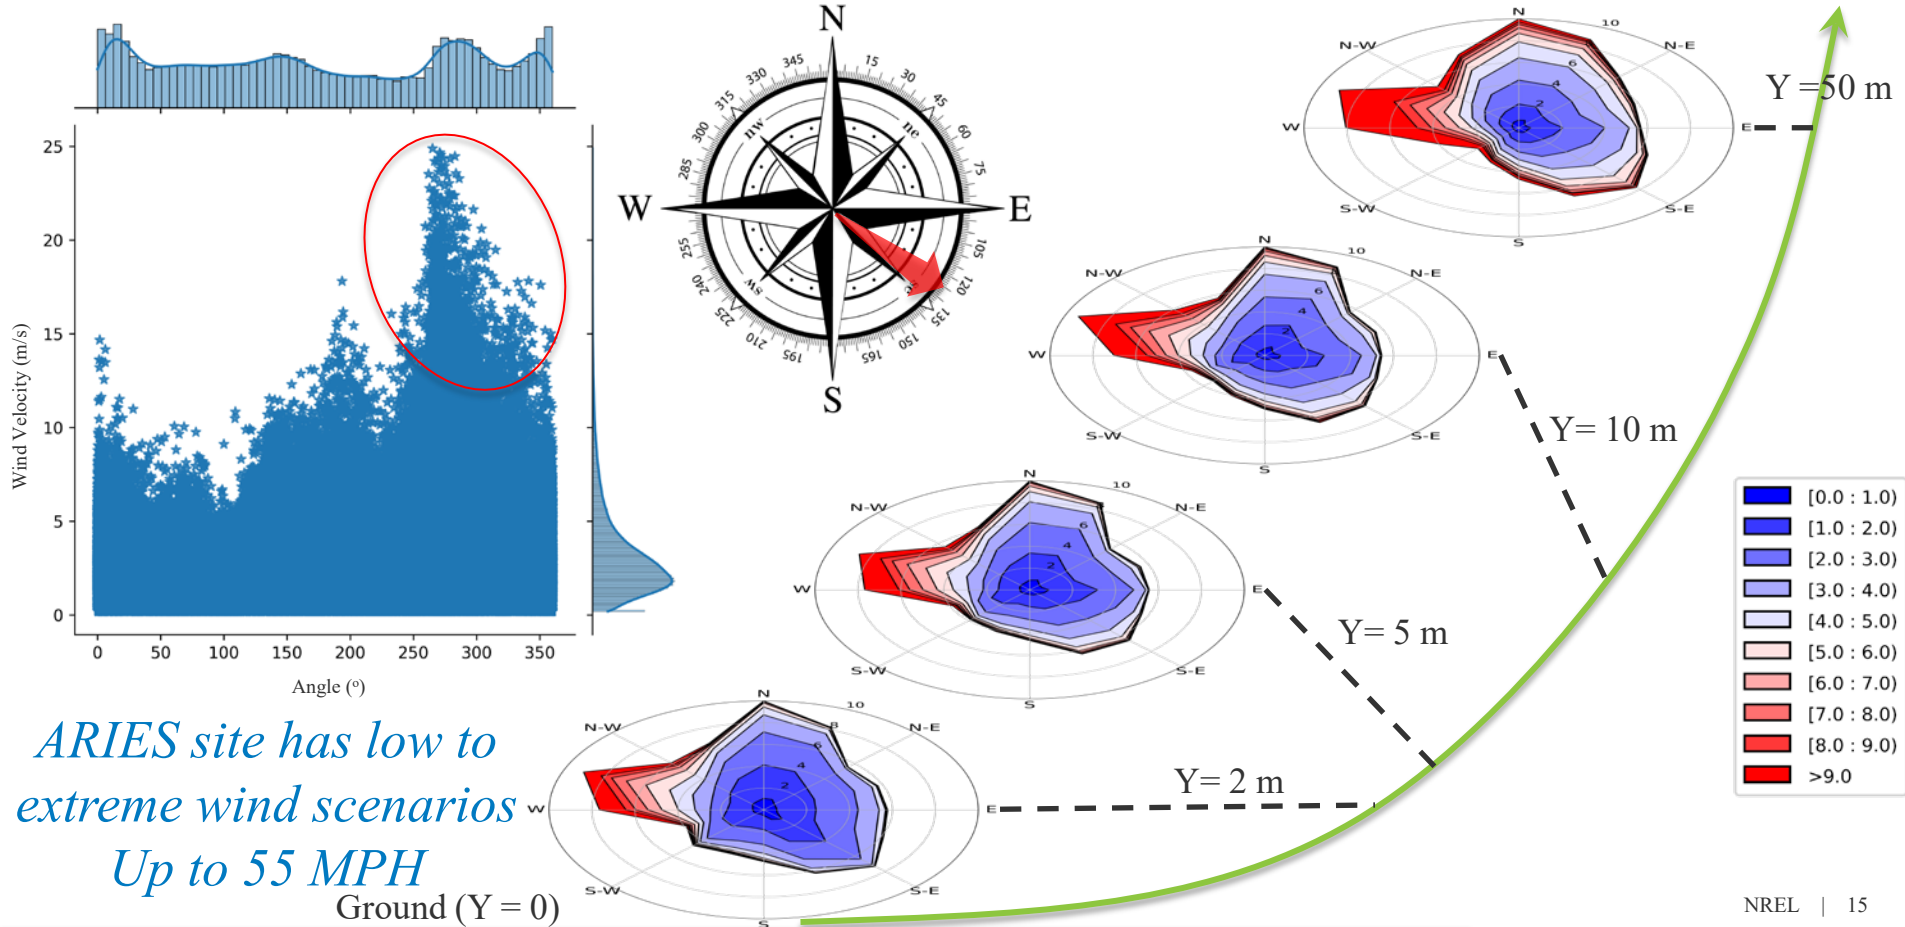

*Site-specific and accurate representation of ARIES in modeling*

Aerial view of the hydrogen infrastructure and grid integration research pads at National Renewable Energy Laboratory's (NREL's) Flatirons Campus.

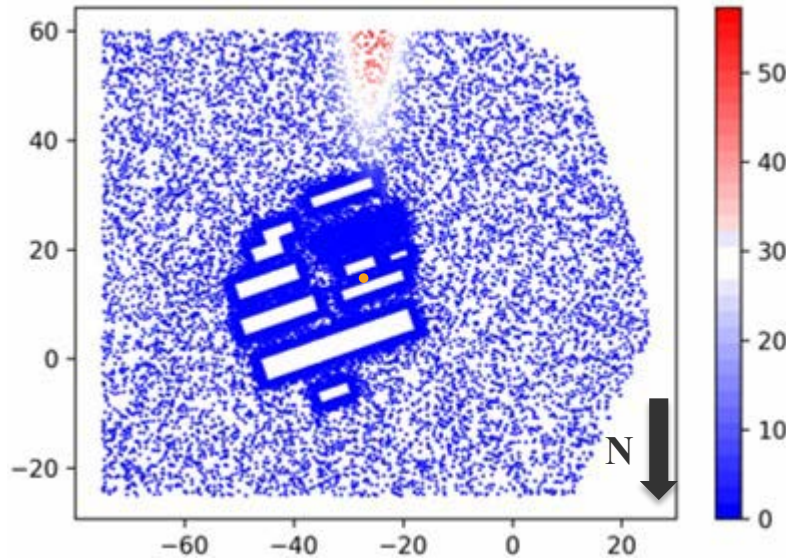

# Windrose plots at various heights (2,5,10,50 m)

*ARIES site has low to extreme wind scenarios*  
*Up to 55 MPH*  
 Ground (Y = 0)

# CFD modeling and statical sampling

- 240 simulations for 1 year weather data (30 unique wind conditions) and 8 wind directions (45° interval)

~1 M data point tracked over 240 simulations

*Large data ensemble and processing techniques for simulation-based approach*

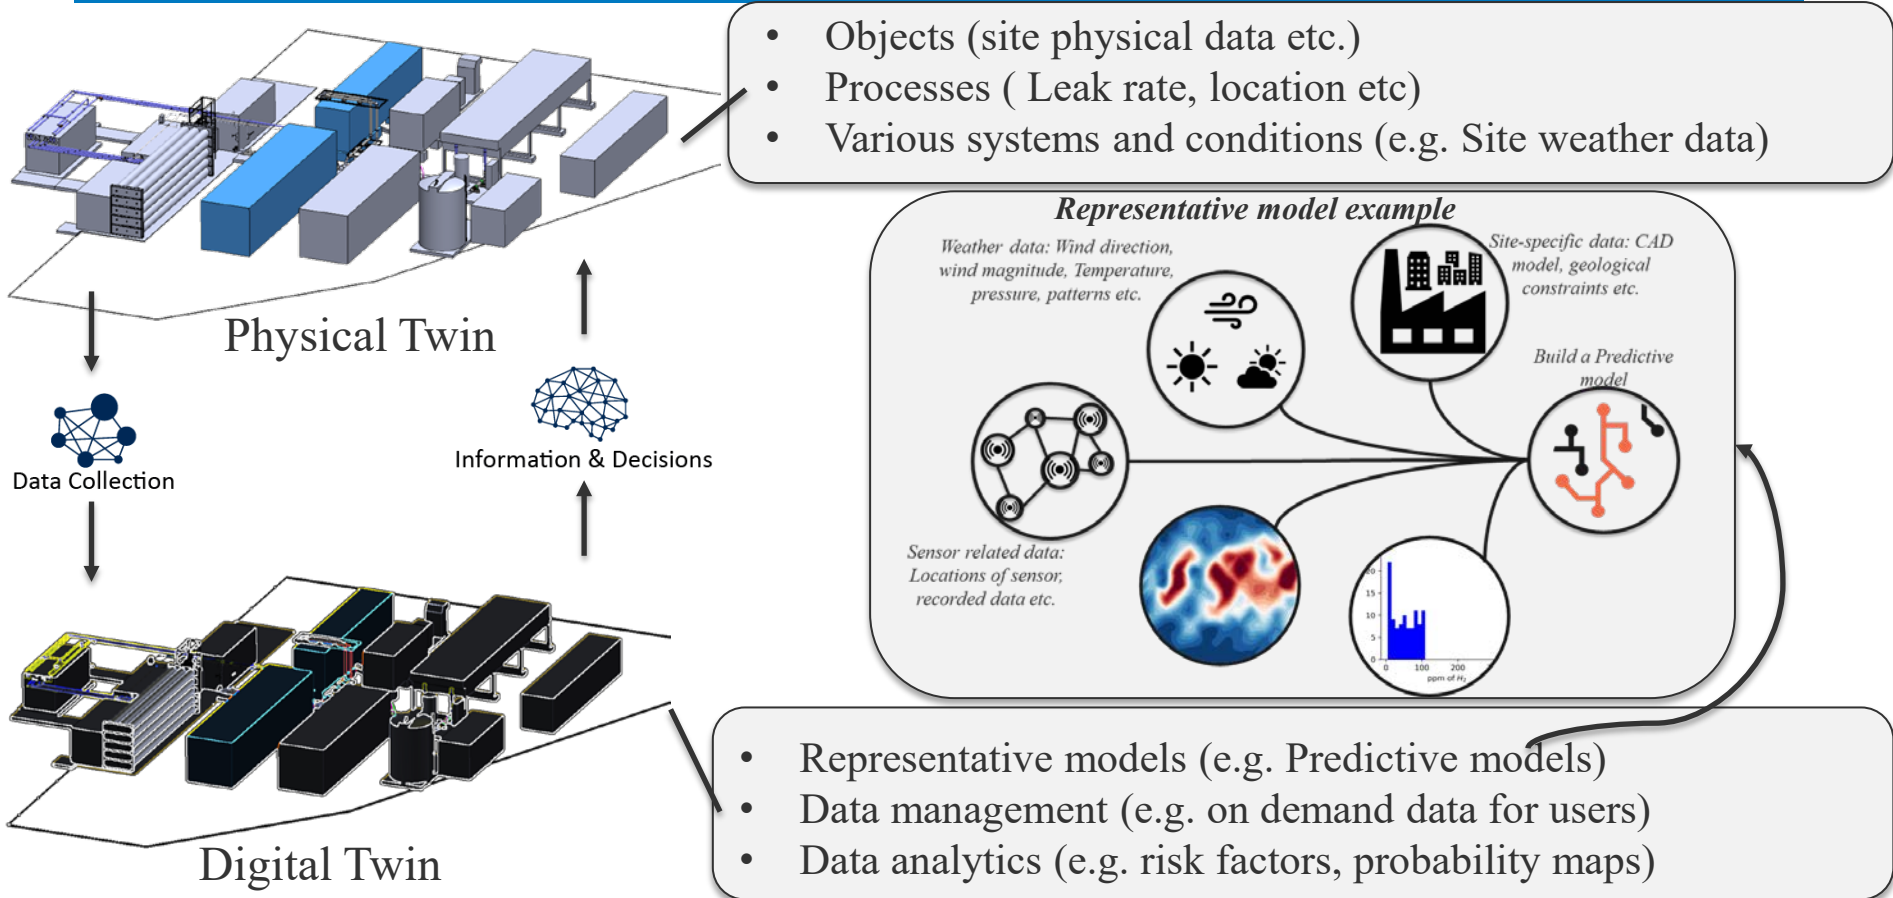

# Sensor placement map- Current status of the project

- Landmark points for reference as placement

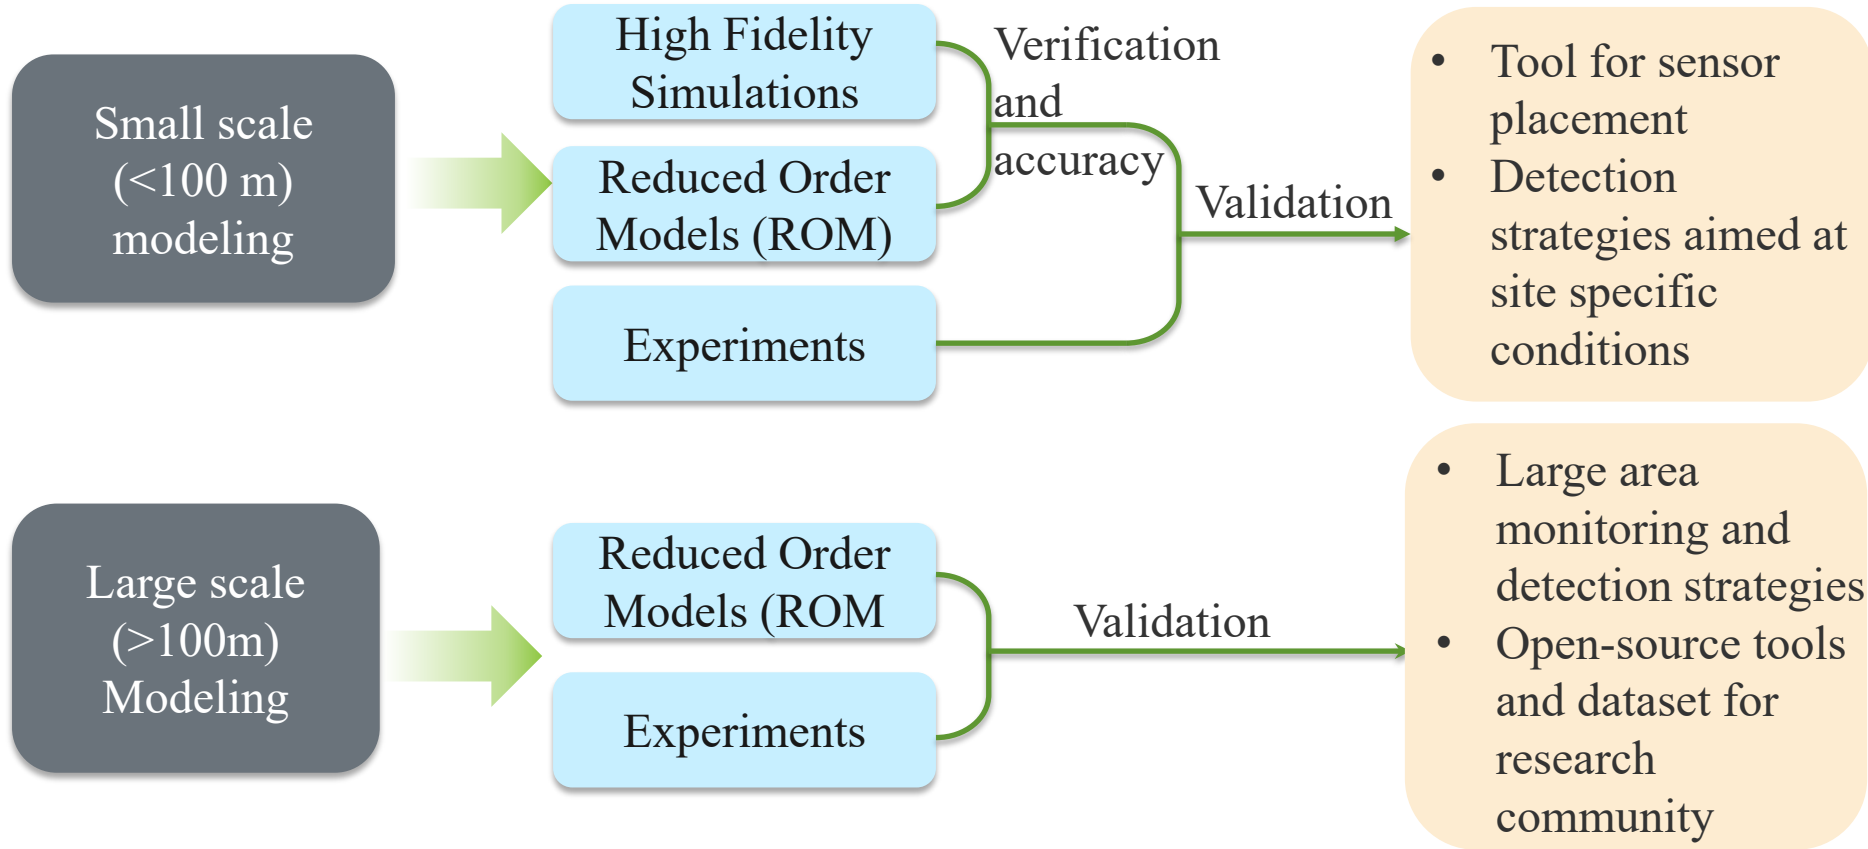

*Sensor placement with their respective landmarks*

# Digital Twin development (Industry partner : GTI energy)

# Modeling Strategy

# Future work and Planned activities

RANS based CFD simulations

High Fidelity simulations in OpenFOAM

Explore Reduced order models (ROM) for >100 m for large scale dispersion

ARIES CFD/ROM based Leak source predictor models

Develop ARIES as testbed for hydrogen sensor testing and validation

Build dataset/Digital twin to as benchmark for the other academic and partner institutions for hydrogen dispersion

*Continuous improvement in analysis and modeling strategy while incorporating stakeholder engagement and interest for ARIES and hydrogen capabilities at NREL*

Support for the NREL HSR&D Program is through the DOE HFTO Safety, Codes & Standards (Laura Hill, Technology Manager and Christine Watson, Technology Manager)

Specific support for modeling hydrogen releases was provided under the 2021 H2@Scale CRADA Call Supporting Advanced Research on Integrated Energy Systems (ARIES) CRADA “Next Generation Hydrogen Leak Detection--Smart Distributed Monitoring for Unintended Hydrogen Releases”

Pending: ARPA-E Funding Opportunity No. DE-FOA-0002784 “H2Sense”
